<th>Authorization Form #</th>
</tr>
</thead>
</table>

**Section 2: For clients (adult and pediatric*) with daily, unresolvable, urinary or bowel incontinence.**

- □ Condition is not amenable to improvement by surgery, application of any device or client is unfit for any such procedure.
- □ Assessment has been completed by specialist incontinence practitioner**. Documentation of assessment by a specialist does not need to be submitted to AADL but needs to be retained by the Authorizer and produced if requested.
- □ Lifestyle modification strategies*** have been tried for a minimum of three months
- □ Pediatric client has low functioning, either cognitively or developmentally and will not achieve continence (including those children who will not train in the next year).

**Section 3: For clients (adult and pediatric) with daily, unresolvable urinary or bowel incontinence that have a diagnosed congenital anomaly, or physiological abnormality including lack of bladder innervation that prevents the ability to achieve continence. These clients do not need to meet requirements under section 2.**

**Diagnosis:**

**Section 4: Clients with end of life diagnosis (life expectancy of no longer than six months). These clients do not need to meet requirements under section 2.**

- □ Palliative

Note: Prior approval from the program manager is required when authorizing both catheters and diaper products.

---

*Note- Client will be authorized for benefits for a maximum of six months.*
