*NEW

Please note that if you cannot access one of the direct website links referred to in this document, you can find diploma examination-related materials on the Alberta Education website.
Introduction

The purpose of this bulletin is to provide teachers of Mathematics 30–2 with information about the diploma examinations scheduled in the 2020–2021 school year. This bulletin should be used in conjunction with the current Mathematics 30–2 Program of Studies, the Mathematics 30–2 Written-Response Information document, and the Mathematics 30–2 Assessment Standards and Exemplars document to ensure that the curriculum and standards are addressed.

*NEW This bulletin includes descriptions of the Mathematics 30–2 Diploma Examinations that will be administered in November 2020 and in January, April, June, and August of 2021; descriptions of the acceptable standard and the standard of excellence; and subject-specific information. The mark awarded to a student on the Mathematics 30–2 Diploma Examinations in the 2020–2021 school year will account for 30% of the student’s final blended mark, and the school-awarded mark will account for the remaining 70%.

Teachers are encouraged to share the contents of this bulletin with students.

For further information regarding program implementation, refer to the Alberta Education website.
Examination Security

All diploma examinations will be held secure until they are released to the public by the Minister. No secure diploma examination is to be previewed until it is released to the public by the Minister. No secure diploma examination is to be previewed, discussed, copied, or removed from the room in which the examination is being written.

The perusal of diploma examinations is not permitted for any exam administration in 2021. Perusal copies will not be provided for the January 2021 or June 2021 administrations.

For mathematics and science diploma exams: All diploma examination booklets must be kept secure, without exception.

For humanities diploma exams: All diploma examination booklets, including humanities Part A: Written Response, must be kept secure, without exception.

All diploma exam booklets, including unused copies of all diploma exams, must be returned to Alberta Education as per the dates indicated in the Schedule of Significant Dates.

For more information about examination security, please refer to the General Information Bulletin.

Time Limits on Diploma Examinations

All students may use extra time to write diploma examinations. This means that all students have up to 6 hours to complete the Mathematics 30–2 Diploma Examination, if they need it. The examination is nevertheless designed so that the majority of students can complete it within 3 hours. The examination instructions state both the designed time and the total time available.

Extra time is available for diploma examinations in all subjects, but the total time allowed is not the same in all subjects. For more information about accommodations and provisions for students, please refer to the General Information Bulletin.
Maintaining Consistent Standards over Time on Diploma Examinations

A goal of Alberta Education is to make scores achieved on examinations within the same subject directly comparable from session to session, to ensure fairness to students across administrations.

To achieve this goal, the examination has a number of questions in common with a previous examination. Common items are used to find out if the student population writing in one administration differs in achievement from the student population writing in another administration. Common items are also used to find out if the unique items (questions that have never appeared in a previous examination) differ in difficulty from the unique items on the baseline examination that sets the standard to which all students are held.

A statistical process called equating adjusts for differences in difficulty between examinations. Examination marks may be adjusted depending upon the difficulty of the examination written relative to the baseline examination. Therefore, the resulting equated examination scores have the same meaning regardless of when and to whom the examination was administered. Equated diploma examination marks are reported to students. More information about equating is available here.

Because of the security required to ensure fair and appropriate assessment of student achievement over time, Mathematics 30–2 Diploma Examinations will be fully secured and will not be released at the time of writing.
Diploma Examinations: Multiple Forms

As part of Alberta Education’s commitment to fairness to students and flexibility in the writing of diploma examinations, there are two distinct forms (versions) of diploma examinations in some subjects during major administrations (January and June). The two forms are equated to baseline examinations to ensure that the same standard applies to both forms. Both forms adhere to the established blueprint specifications and are reviewed by a technical review committee.

To facilitate the analysis of school-level results, each school receives only one examination form per subject. In subjects offering a translated French-language examination, both forms are administered in English and in French.

**For more information, contact**

Deanna Shostak  
Director, Diploma Programs  
780-422-5160 or Deanna.Shostak@gov.ab.ca

Field Testing

Field testing is an essential stage in the development of fair, valid, and reliable provincial examinations. Field testing is a process of collecting data on questions before they become part of a diploma examination. Potential diploma examination questions are administered to students in diploma courses throughout the province to determine the difficulty level and appropriateness of the question. Each field test requires a large student sample to provide the examination developers with reliable information (statistical data and written validation comments from teachers and students).

How do field tests help teachers and students?

Teachers receive each student’s score promptly, gaining useful information about their students’ performance. Students benefit from writing a test that duplicates some of the experience of writing a diploma examination. Field tests provide students and teachers with examples of the format and content of questions that may appear on diploma examinations. Finally, because of field testing, students, teachers, and parents can be reassured that the questions on diploma examinations have undergone a rigorous process of development, improvement, and validation.

How are field-test data used?

The data received from field tests indicate the validity, reliability, and fairness of each question. Questions that meet specific standards are selected for use on future diploma examinations.

Some questions or sets of questions may not initially perform as well as we require. These questions may be revised and field tested again. Revisions are influenced by the written comments of students and teachers, who provide valuable advice about the appropriateness of the questions, adequacy of writing-time limits, test length, text readability, artwork/graphics clarity and suitability, and question difficulty.

Mathematics field tests

Mathematics field tests are available in conventional paper form and offered online using Alberta Education’s Quest A+ online delivery system. Paper-format field tests contain machine-scored and written-response questions. Online field tests contain machine-scored questions only.

For online mathematics field tests, students may use the paper formula sheet. The same formulas will also appear in the online delivery system. Students should also have scrap paper, which may be accessed and downloaded from the “Teacher Resources” section on the homepage of the Field Test Request System. All paper formula sheets or scrap paper with markings must be securely shredded at the end of the field-test administration.

Teachers have a 24-hour period to peruse digital field tests and are provided with data on how their students performed. These data include the proportion of students who chose each alternative for multiple-choice items and the proportion who left a numerical-response item blank. Test items are blueprinted to program of studies outcomes, which allows teachers to use field-test results to learn more about their students’ strengths and areas for improvement.
Once logged into the digital field test on the online delivery system, teachers have the same length of time to peruse the test as their students did to write it. Teachers might choose to log into the field test, submit the confidentiality form, and then log out of the test, so that they can finish perusing the test after receiving their students’ data.

More information about field-test registration deadlines, administration, and security is available [here](#).

It is important to note that the security of field-test items remains vital to the administration of diploma examinations. Participating teachers must commit to maintaining the security of field-test items. Paper-format field tests are mailed to schools and must be kept secure by the school principal until administration. After the administration, all paper copies must be mailed back to Alberta Education.

**How can teachers request field tests?**

Teachers requesting field tests must have a Public Authentication System (PAS) account. All requests are made through the [Field Test Request System](#). Further information, including the closing dates to request and administer a field test, may be obtained [here](#), or by contacting [Field.Test@gov.ab.ca](mailto:Field.Test@gov.ab.ca). Practice tests are available [online](#).

**For more information, contact**

Deanna Shostak  
Director, Diploma Programs  
780-422-5160 or [Deanna.Shostak@gov.ab.ca](mailto:Deanna.Shostak@gov.ab.ca)

or

Pascal Couture  
Director, Exam Administration  
780-643-9157 or [Pascal.Couture@gov.ab.ca](mailto:Pascal.Couture@gov.ab.ca)
Practice Tests

To give students an opportunity to practise diploma examination-style questions and content, Alberta Education produces practice tests for most subjects that have a diploma examination. Students can access these practice tests using Alberta Education’s online test delivery system.

Special-format Practice Tests

To give students an opportunity to practise diploma examination-style questions and content in Braille, audio, large print, or coloured print versions, Alberta Education produces special-format practice tests for all subjects that have a diploma examination. Alberta schools with registered Alberta K–12 students may place orders for these tests. Braille versions are available in English and, by request, in French. All tests are provided free of charge, but limits may be placed on order volumes to ensure access for all students.

For the greatest benefit, special-format practice tests should be written under conditions similar to those of the corresponding diploma examination. The same rules regarding the use of resources and devices should be followed.

Braille versions must be returned to Alberta Education after use.

For more information or to place an order, contact

Laura LaFramboise
Distribution Coordinator, Examination Administration
780-492-1644
Laura.LaFramboise@gov.ab.ca

Audio Descriptions

Examples of Descriptions Used in Audio Versions of Mathematics Diploma Exams has been developed to assist teachers and students planning to use an audio version during the administration of a diploma examination.
Course Objectives

The Mathematics 30–2 course is made up of outcomes, as specified in the program of studies, and emphasizes the mathematical understandings and critical thinking skills for daily life, direct entry into the workforce, and post-secondary studies in programs that do not require the study of calculus. In Mathematics 30–2, algebraic, numerical, and graphical methods are used to solve problems. Technology, such as graphing calculators, is also used to enable students to explore and create patterns, examine relationships, test conjectures, model, and solve problems.

Students are expected to communicate solutions clearly and effectively when solving both routine and non-routine problems. Students are also expected to apply mathematical concepts and procedures to meaningful real-world problems. It is important to realize that it is acceptable for students to solve problems in different ways and that solutions may vary depending upon how the problem is understood.

The program of studies is available online at alberta.ca.
Mathematical Processes

The seven mathematical processes are critical aspects of learning, doing, and understanding mathematics. Students must encounter these processes regularly in a mathematics program in order to achieve the goals of mathematics education.

This program of studies incorporates the following interrelated mathematical processes. They are to permeate the teaching and learning of mathematics.

<table>
<thead>
<tr>
<th>Students are expected to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication [C]</td>
</tr>
<tr>
<td>Connections [CN]</td>
</tr>
<tr>
<td>Mental Mathematics and Estimation [ME]</td>
</tr>
<tr>
<td>Problem Solving [PS]</td>
</tr>
<tr>
<td>Reasoning [R]</td>
</tr>
<tr>
<td>Technology [T]</td>
</tr>
<tr>
<td>Visualization [V]</td>
</tr>
</tbody>
</table>

For further details about each of these processes, please refer to the Conceptual Framework for Grades 10–12 Mathematics found in the Mathematics Grades 10–12 Program of Studies.
Performance Expectations

Curriculum Standards
Provincial curriculum standards help to communicate how well students need to perform in order to be judged as having achieved the objectives specified in the Mathematics 30–2 Program of Studies. The specific statements of standards are written primarily to inform Mathematics 30–2 teachers of the extent to which students must both know the Mathematics 30–2 content and demonstrate the required skills in order to pass the diploma examination.

Performance Standards

Acceptable standard
Students who attain the acceptable standard but not the standard of excellence will receive a final course mark between 50% and 79%, inclusive. Typically, these students have gained new skills and a basic knowledge of the concepts and procedures relative to the general and specific outcomes defined for Mathematics 30–2 in the program of studies. They demonstrate mathematical skills as well as conceptual understanding and can apply their knowledge to familiar problem contexts.

Standard of excellence
Students who attain the standard of excellence will receive a final course mark of 80% or higher. Typically, these students have gained a breadth and depth of understanding regarding the concepts and procedures, as well as the ability to apply this knowledge and conceptual understanding to a broad range of familiar and unfamiliar problem contexts.

Assessment Standards and Exemplars
A document that describes acceptable standard and standard of excellence performance levels appropriate to the Mathematics 30–2 Program of Studies can be found on the Alberta Education website. This document also contains assessment exemplars to assist teachers and students with the interpretation of curricular outcomes in the program of studies.
Examples of Written-response Questions

The Mathematics 30-2 Written-response Information document and the Mathematics 30-2 Released Materials 2019 document contain examples of written-response questions, sample responses, and scoring rationales as they relate to the general scoring guides and can be found here. The purpose of these documents is to help teachers and students understand the intent of the written-response component of the diploma examination, provide information about how the scoring guide is applied to specific questions, and encourage the use of the general scoring guide in class assignments. Teachers and students should note that certain directing words are bolded in written-response questions on diploma examinations. A list of these directing words and their definitions can be found on page 27 of this bulletin.

Explanation of Cognitive Levels

Procedural
The assessment of students’ knowledge of mathematical procedures should involve recognition, execution, and verification of appropriate procedures and the steps contained within them. The use of technology can allow for conceptual understanding prior to specific skill development or vice versa. Students must appreciate that procedures are created or generated to meet specific needs in an efficient manner and thus can be modified or extended to fit new situations. Assessment of students’ procedural knowledge will not be limited to an evaluation of their proficiency in performing procedures, but will be extended to reflect the skills presented above.

Conceptual
An understanding of mathematical concepts goes beyond a mere recall of definitions and recognition of common examples. Assessment of students’ knowledge and understanding of mathematical concepts should provide evidence that they can compare, contrast, label, verbalize, and define concepts; identify and generate examples and counter-examples as well as properties of a given concept; recognize the various meanings and interpretations of concepts; and defend procedures and personal strategies. Students who have developed a conceptual understanding of mathematics can also use models, symbols, and diagrams to represent concepts. Appropriate assessment provides evidence of the extent to which students have integrated their knowledge of various concepts.

Problem solving
Appropriate assessment of problem-solving skills is achieved by allowing students to adapt and extend the mathematics they know and by encouraging the use of strategies to solve unique and unfamiliar problems. Assessment of problem solving involves measuring the extent to which students use these strategies and knowledge, and their ability to verify and interpret results. Students’ ability to solve problems develops over time as a result of their experiences with relevant situations that present opportunities to solve various types of problems. Evidence of problem-solving skills is often linked to clarity of communication. Students demonstrating strong problem-solving skills should be able to clearly explain the process they have chosen, using appropriate language and correct mathematical notation and conventions.
Examination Specifications and Design

Each *Mathematics 30–2 Diploma Examination* is designed to reflect the core content outlined in the *Mathematics 30–2 Program of Studies*. The examination is limited to those outcomes that can be measured by a paper-and-pencil test. Therefore, the percentage weightings shown below will not necessarily match the percentage of class time devoted to each topic.

The format and content of the *Mathematics 30–2 Diploma Examinations* in the 2020-21 school year are as follows.

**Specifications**

<table>
<thead>
<tr>
<th>Question Format</th>
<th>Number of Questions</th>
<th>Emphasis</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machine Scored</td>
<td></td>
<td>75%</td>
</tr>
<tr>

</tbody>
</table>
Machine-scored questions

Information required to answer multiple-choice and/or numerical-response questions is often located in a box preceding the question. The questions that require the use of the information given in the box will be clearly listed above the box: e.g., “Use the following information to answer questions 3 and 4.”

For multiple-choice questions, students are to choose the correct or best possible answer from the four alternatives.

For some numerical-response questions, students are to calculate a numerical answer and record their answer in a separate area of the answer sheet. If the answer to be recorded can be a decimal value, then students are asked to record their answer to the nearest tenth or nearest hundredth, as specified in the question. If an answer is a value between 0 and 1 (e.g., 0.25), then students should ensure that they record the 0 before the decimal place. Students should retain all decimals throughout the question, and rounding should occur only in the final answer.

When the answer cannot be a decimal value, students are asked to determine a whole number value: e.g., “The number of people is ______.”; “The degree of this polynomial is ______.”

Other numerical-response questions require students to record their understanding of a concept. The following are examples of these types of questions.
Correct-order Question

Use the following information to answer numerical-response question 1.

In a particular puzzle, the digits 1 through 9 are placed in nine circles arranged in a triangle. Each digit can be used only once. When the puzzle is completed, the digits on each side of the triangle must add to 17. A partially completed puzzle is shown below.

![Diagram of the puzzle]

**Numerical Response**

1. When the puzzle is completed correctly, the value of
   - B is ________ (Record in the first column)
   - D is ________ (Record in the second column)
   - E is ________ (Record in the third column)

(Record your answer in the numerical-response section on the answer sheet.)

Answer: 478
Correct-order Question

Use the following information to answer numerical-response question 2.

The odds in favour of four events occurring are shown below.

<table>
<thead>
<tr>
<th>Event</th>
<th>Odds</th>
</tr>
</thead>
<tbody>
<tr>
<td>Event 1</td>
<td>7 : 12</td>
</tr>
<tr>
<td>Event 2</td>
<td>15 : 4</td>
</tr>
<tr>
<td>Event 3</td>
<td>14 : 3</td>
</tr>
<tr>
<td>Event 4</td>
<td>21 : 5</td>
</tr>
</tbody>
</table>

**Numerical Response**

2. When these four events are arranged in order from the **most** likely to occur to the **least** likely to occur, the order is _____, _____, _____, and _____.

(Record all four digits of your answer in the numerical-response section on the answer sheet.)

Answer: 3421
Any-order Question

Use the following information to answer numerical-response question 3.

A student is working on simplifying the expression \( \frac{2x^2 - 18}{12 - 6x} \div \frac{2x + 10}{x^2 - 4} \).

Six statements are made regarding the non-permissible values of this expression.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Statement 1</td>
<td>( x = 3 )</td>
</tr>
<tr>
<td>Statement 2</td>
<td>( x = -3 )</td>
</tr>
<tr>
<td>Statement 3</td>
<td>( x = 2 )</td>
</tr>
<tr>
<td>Statement 4</td>
<td>( x = -2 )</td>
</tr>
<tr>
<td>Statement 5</td>
<td>( x = 5 )</td>
</tr>
<tr>
<td>Statement 6</td>
<td>( x = -5 )</td>
</tr>
</tbody>
</table>

Numerical Response

3. The three statements above that represent the non-permissible values of the expression are statements _____, _____, and _____.

(Record all three digits of your answer in any order in the numerical-response section on the answer sheet.)

Answer: 346 (in any order)
Multiple-answer Question

Use the following information to answer numerical-response question 4.

A rational expression in the form \( \frac{A}{B} \cdot \frac{3m^3}{6n^2} \) can be simplified to \( \frac{m}{n} \), where \( m \neq 0, n \neq 0 \). Celine knows that the original rational expression can be formed by selecting expressions for \( A \) and \( B \) from the tables below.

<table>
<thead>
<tr>
<th>Possible Expression for ( A )</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \frac{2}{n} )</td>
<td>1</td>
</tr>
<tr>
<td>( \frac{3}{n} )</td>
<td>2</td>
</tr>
<tr>
<td>( 2n^2 )</td>
<td>3</td>
</tr>
<tr>
<td>( 2n^3 )</td>
<td>4</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Possible Expression for ( B )</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>( nm )</td>
<td>5</td>
</tr>
<tr>
<td>( \frac{2}{nm} )</td>
<td>6</td>
</tr>
<tr>
<td>( \frac{2}{n} )</td>
<td>7</td>
</tr>
</tbody>
</table>

Numerical Response

4. Record the code numbers that identify the expressions Celine can select for \( A \) and \( B \) to form the original rational expression. (There is more than one correct answer.)

\[
\text{Code Number: } \quad A \quad \quad B
\]

(Record both digits of your answer in the numerical-response section on the answer sheet.)

Answer: 36 or 47
Written-response questions

The written-response component is designed to assess the degree to which students can draw on their mathematical experiences to solve problems, explain mathematical concepts, and demonstrate their algebraic skills. A written-response question will cover more than one specific outcome and will require students to make connections between concepts.

Students may be asked to solve, explain, or prove in a written-response question. Students are required to know the definitions and expectations of directing words such as algebraically, compare, determine, evaluate, justify, and sketch. A list of these directing words and their definitions can be found on page 27 of this bulletin.

Students should be encouraged to try to solve all problems, as an attempt at a solution may be worth partial marks. The two written-response questions each consist of four parts and will address multiple cognitive levels. Each question is scored out of a total of 7 marks; it will begin with a 1-mark part followed by three 2-mark parts. Students should note that all of their solutions to written-response questions should include appropriate use of units and appropriate rounding.
**Mathematics 30–2**  
Grade 12 Diploma Examination

### Description

**Time:** 3 hours. This closed-book examination was developed to be completed in 3 hours; however, you may take up to 6 hours to complete the examination, should you need it.

This examination consists of:
- 24 multiple-choice and 8 numerical-response questions worth 75% of the total examination mark
- 2 written-response questions worth 25% of the total examination mark

A tear-out formula sheet is included in this booklet.

All graphs on this examination are computer-generated.

**Do not write your name anywhere in this booklet.**

---

**Instructions**

- **Turn to the last page of the examination booklet.** Carefully fold and tear out the machine-scored answer sheet along the perforation.
- Use **only** an HB pencil for the answer sheet.
- Fill in the information on the back cover of the examination booklet and the answer sheet as directed by the presiding examiner.
- You must use a graphing calculator approved by Alberta Education.
- You **must** have cleared your calculator of all information that is stored in the programmable or parametric memory.
- Read each question carefully.
- Consider all numbers to be **exact** numbers and not the result of a measurement.
- If you wish to change an answer, erase all traces of your first answer.
- Do **not** fold the answer sheet.
- The presiding examiner will collect your answer sheet and examination booklet and send them to Alberta Education.
- Now read the detailed instructions for answering machine-scored and written-response questions.

---

**Note:** The perforated pages at the back of this booklet may be torn out and used for your rough work. **No marks** will be given for work done on the tear-out pages.
**Multiple Choice**

- Decide which of the choices best completes the statement or answers the question.
- Locate that question number on the separate answer sheet provided and fill in the circle that corresponds to your choice.

**Example**

This examination is for the subject of

A. biology  
B. physics  
C. chemistry  
D. mathematics

Answer: D  
Record D on the answer sheet: ☐ ☐ ☐ ☐

**Numerical Response**

- Record your answer on the answer sheet provided by writing it in the boxes and then filling in the corresponding circles.
- If an answer is a value between 0 and 1 (e.g., 0.25), then be sure to record the 0 before the decimal place.
- Enter the first digit of your answer in the left-hand box. Any boxes on the right that are not needed are to remain blank.

**Examples**

**Calculation Question and Solution**

The average of the values 2.7, 8.1, and 5.2, to the nearest tenth, is _________.

(Record your answer in the numerical-response section on the answer sheet.)

Calculator value: 5.333333…  
Answer: 5.3  
Record 5.3 on the answer sheet: 5 3

**Any-order Question and Solution**

Four Words

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Circle</td>
<td>3</td>
<td>Triangle</td>
</tr>
<tr>
<td>2</td>
<td>Multiply</td>
<td>4</td>
<td>Rectangle</td>
</tr>
</tbody>
</table>

The three shapes in the list above are numbered _____ _____ and ___.

(Record all three digits of your answer in any order in the numerical-response section on the answer sheet.)

Answer: 134 (in any order)

Record 134 on the answer sheet: 1 3 4

**Note:** All answers containing only the three digits 1, 3, and 4, in any order, will be scored as correct.
Correct-order Question and Solution

Four exponential functions of the form \( y = b^x \) are listed below.

**Function 1** : \( y = 1.2^x \)
**Function 2** : \( y = 1.4^x \)
**Function 3** : \( y = 1.5^x \)
**Function 4** : \( y = 1.1^x \)

When these four functions are arranged in order from the **lowest** \( b \) value to the **highest** \( b \) value, the order is ___ , ___ , ___ , and ___.

(Record all **four digits** of your answer in the numerical-response section on the answer sheet.)

Answer: 4123

Correct-order Question and Solution

In the table below, the two numbers in each horizontal row add to 7.

<table>
<thead>
<tr>
<th>1</th>
<th>( a )</th>
</tr>
</thead>
<tbody>
<tr>
<td>( b )</td>
<td>2</td>
</tr>
<tr>
<td>( c )</td>
<td>4</td>
</tr>
</tbody>
</table>

In the table above, the value of

\( a \) is ________ (Record in the **first** column)
\( b \) is ________ (Record in the **second** column)
\( c \) is ________ (Record in the **third** column)

(Record your answer in the numerical-response section on the answer sheet.)

Answer: 653

Written Response

• Write your responses in the examination booklet as neatly as possible.

• For full marks, your responses must address **all** aspects of the question.

• All responses, including descriptions and/or explanations of concepts, must include pertinent ideas, calculations, formulas, and correct units.

• Your responses must be presented in a well-organized manner. For example, you may organize your responses in paragraphs or point form.
## General Scoring Guides

The General Scoring Guides, developed in consultation with teachers and Alberta Education staff, describe the criteria and performance level at each score-point value. These General Scoring Guides will be used to develop specific scoring descriptions for each written-response question.

In scoring the written-response questions, markers will evaluate how well students

- demonstrate their understanding of the problem or the mathematical concept;
- correctly apply mathematical knowledge and skills;
- use problem-solving strategies and explain their solutions and procedures;
- communicate their solutions and mathematical ideas.

### 1-mark part

<table>
<thead>
<tr>
<th>Score</th>
<th>General Scoring Guide</th>

<td>No response is provided.</td>
</tr>
<tr>
<td>0</td>
<td>In the response, the student does not address the question or provides a solution that is invalid.</td>
</tr>
<tr>
<td>0.5</td>
<td>In the response, the student demonstrates complete mathematical understanding of the problem by applying an appropriate strategy or relevant mathematical knowledge to find a complete and correct solution.</td>
</tr>
<tr>
<td>1</td>
<td>In the response, the student demonstrates complete mathematical understanding of the problem by applying an appropriate strategy or relevant mathematical knowledge to find a complete and correct solution.</td>
</tr>
</tbody>
</table>

Specific Scoring Guides for each written-response question will provide detailed descriptions to clarify expectations of student performance at each benchmark score: 0, 1, and 2. A student response that does not meet the performance level of a benchmark score may receive an augmented score of 0.5 or 1.5. Descriptions of these augmented scores will be determined with teachers at each marking session and are not an exhaustive list.
Commentary on the Mathematics 30–2 Diploma Examinations

Introduction

The 2019–2020 school year was the second year for the Mathematics 30–2 Diploma Examination with a written-response component. In general, feedback from teachers has indicated a high degree of satisfaction with the examinations in terms of fidelity to, and support of, the program of studies.

Overview of diploma examination development process

Throughout the diploma examination development process, Alberta Education makes every effort to ensure that examinations reflect the content of new programs. Prior to implementation in 2013, seven province-wide consultations, involving over 120 teachers, were held to discuss the blueprint for the Mathematics 30–2 Diploma Examinations. Also, following the announcement in 2016 that a written-response component would be integrated into the examinations, further consultations involving over 200 teachers were held across Alberta to discuss the new blueprint as well as the format and weighting of the written-response component. During both of these consultations and other development work, teachers were involved in developing items, determining performance standard descriptors, and developing the blueprint. After implementation, teachers continue to be involved in developing items, reviewing field tests, and validating diploma examinations.

Every Mathematics 30–2 Diploma Examination is built to the published blueprint, which reflects the program of studies. To help ensure this, teachers, post-secondary representatives, and staff from the High School Curriculum Sector were extensively involved in the validation processes.

General commentary

Logical Reasoning

• Students perform very well on puzzles and games involving numerical and logical reasoning.

• Students have shown improvement in their ability to organize and analyze two sets within a universal set, including the operation of two sets that involve complements.

• Weaker students continue to have trouble organizing and interpreting information that involves three sets, but they tend to perform better when a diagram is provided.
Probability

- Students are able to convert probability to odds and vice versa, but weaker students find this difficult.

- Some students are having difficulty with odds statements compared to probability statements; i.e., odds are considered “part-part” and probability is considered “part-whole.”

- Students have difficulty calculating the probability of non-mutually exclusive events and dependent events, as well as probabilities that involve permutations and combinations.

- Some students confuse the distinction between mutually exclusive and non-mutually exclusive events with the distinction between independent and dependent events.

- Students have difficulty calculating probability when there is more than one case to consider. Most students are able to recognize that there is more than one case, but they either do not combine them or combine them incorrectly.

- Students perform well on permutation questions that involve one restriction, as well as combination questions that involve a single case.

- Students have shown improvement in solving combination questions that involve more than one case.

- Some students continue to express probability as a percent, rather than a value in the range of 0 to 1. This is of particular concern in numerical-response questions.

Relations and Functions

- Students are generally very successful in performing regressions, but they need to pay special attention to the use of non-rounded values in the resulting regression function to predict an unknown value.

- Students have difficulty solving exponential equations that cannot be written as powers with a common base.

- Students have shown improvement in simplifying logarithmic expressions using multiple laws of logarithms.

- Students are proficient in the simplification of rational expressions and stating non-permissible values.

- Students are becoming more proficient in multiplying and dividing rational expressions, but continue to have difficulty in adding and subtracting rational expressions.

- Students have difficulty in solving rational equations, especially when the rational equation simplifies to a quadratic equation.

- Students have difficulty analyzing sinusoidal functions, especially when the function models a context.

- Students continue to have difficulty solving contextual problems when the equation, table of values, or graph is not provided.

**NOTE:** Students need to round their answers as specified in numerical-response questions.
Observations from written-response component

• The first entry-level part was generally done well.

• Students should be made aware that for each written-response question, part a is worth 1 mark, and parts b, c, and d are each worth 2 marks.

• Students should be reminded that their response must address all aspects of the question, and must include all relevant ideas, calculations, formulas, and correct units. Markers continue to note that students were either not showing their process or showing an incomplete process.

• Students must be aware of the importance of communicating clearly and accurately in their response: i.e., use of proper notation and proper terminology. This is especially evident with outcomes covered in the topic of probability. For example, students are not indicating “odds in favour of A,” “odds against A,” or \( P(\text{event A}) \). As well, students often omit operation signs in their calculations.

• Students should be reminded of the importance of including key labels in their work and clearly indicating their final answer. Markers felt that students who provide multiple different solutions in their response indicated a lack of understanding.

• Students should be reminded that they must be familiar with the specific meaning of the directing words. Many students did not demonstrate that they know, for example, that the directing word \( \text{determine} \) means “Find a solution, to a specified degree of accuracy, to a problem by showing appropriate formulas, procedures, and/or calculations.” As well, they did not demonstrate an understanding that \( \text{algebraically determine} \) requires a complete algebraic process to be shown in their response. Teachers may wish to discuss this with their students.

• Markers felt that students continue to have difficulty relating or connecting their response back to the given context of a question.

• Markers continue to note that the lack of basic algebra skills in student work is an issue.

• Students should be aware that if no rounding directions are provided, then an exact-value answer is required.

• Students should be encouraged to attempt each part of a question as they may receive partial marks.
Mathematics 30–2 Field Testing

Mathematics 30-2 offers both year-end field tests and topic field tests.

Year-end field tests are available in both digital and paper formats. Topic field tests are available in a digital format only. The table below shows the format, number of questions, and registration deadlines for each type of field test available.

<table>
<thead>
<tr>
<th>Field Test Format</th>
<th>Number of Questions</th>
<th>Registration Deadline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Digital Topic</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(Logical Reasoning and Probability)</td>
<td>18 machine-scored (13 MC and 5 NR)</td>
<td>Five working days prior to administration</td>
</tr>
<tr>
<td>Digital Topic</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(Relations and Functions)</td>
<td>18 machine-scored (13 MC and 5 NR)</td>
<td>Five working days prior to administration</td>
</tr>
<tr>
<td>Digital Year-end</td>
<td></td>
<td></td>
</tr>
<tr>
<td>18 machine-scored (13 MC and 5 NR)</td>
<td>Five working days prior to administration</td>
<td></td>
</tr>
<tr>
<td>Paper Year-end</td>
<td></td>
<td></td>
</tr>
<tr>
<td>9 machine-scored (7 MC and 2 NR) and 2 written-response</td>
<td>Refer to Field Testing Program Guide</td>
<td></td>
</tr>
</tbody>
</table>

All field tests are designed to be completed in 60 minutes; however, an additional 15 minutes may be used if available.

For more information on requesting and administering field tests, please refer to the Field Testing Program Guide.
# Mathematics Directing Words

In Provincial Assessment Sector use, mathematics directing words have the following definitions, which students are required to know. These words will be bolded in the written-response questions.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Algebraically</td>
<td>Using mathematical procedures that involve variables or symbols to represent values</td>
</tr>
<tr>
<td>Analyze</td>
<td>Make a mathematical examination of parts to determine the nature, proportion, function, interrelationships, and characteristics of the whole</td>
</tr>
<tr>
<td>Classify</td>
<td>Arrange items or concepts in categories according to shared qualities or characteristics</td>
</tr>
<tr>
<td>Compare</td>
<td>Examine the character or qualities of two things by providing characteristics of both that point out their mutual similarities and differences</td>
</tr>
<tr>
<td>Conclude</td>
<td>Make a logical statement based on reasoning and/or evidence</td>
</tr>
<tr>
<td>Describe</td>
<td>Give a written account of a concept</td>
</tr>
<tr>
<td>Determine</td>
<td>Find a solution, to a specified degree of accuracy, to a problem by showing appropriate formulas, procedures, and/or calculations</td>
</tr>
<tr>
<td>Evaluate</td>
<td>Find a numerical value or equivalent for an equation, formula, or function</td>
</tr>
<tr>
<td>Explain</td>
<td>Make clear what is not immediately obvious or entirely known; give the cause of or reason for; make known in detail</td>
</tr>
<tr>
<td>Illustrate</td>
<td>Make clear by giving an example. The form of the example will be specified in the question: e.g., a word description, sketch, or diagram</td>
</tr>
<tr>
<td>Interpret</td>
<td>Provide a meaning of something; present information in a new form that adds meaning to the original data</td>
</tr>
<tr>
<td>Justify</td>
<td>Indicate why a conclusion has been stated, by providing supporting reasons and/or evidence that form a valid mathematical argument</td>
</tr>
<tr>
<td>Model</td>
<td>Represent a concept or situation in a concrete or symbolic way</td>
</tr>
<tr>
<td>Prove</td>
<td>Establish the truth or validity of a statement by giving factual evidence or logical argument</td>
</tr>
<tr>
<td>Sketch</td>
<td>Provide a drawing that represents the key features or characteristics of an object or graph</td>
</tr>
<tr>
<td>Solve</td>
<td>Give a solution to a problem</td>
</tr>
<tr>
<td>Verify</td>
<td>Establish, by substitution for a particular case or by geometric comparison, the truth of a statement</td>
</tr>
</tbody>
</table>
Mathematics 30–2 Formula Sheet

## Relations and Functions

### Graphing Calculator Window Format

- \( x: [x_{\text{min}}, x_{\text{max}}, x_{\text{scl}}] \)
- \( y: [y_{\text{min}}, y_{\text{max}}, y_{\text{scl}}] \)

### Exponents and Logarithms

- \( y = a^x \leftrightarrow x = \log_a y \)
- \( \log_b c = \frac{\log_a c}{\log_a b} \)

### Laws of Logarithms

- \( \log_b (M \cdot N) = \log_b M + \log_b N \)
- \( \log_b \left( \frac{M}{N} \right) = \log_b M - \log_b N \)
- \( \log_b (M^n) = n \log_b M \)

## Exponential functions

- \( y = a \cdot b^x \)

## Logarithmic functions

- \( y = a + b \cdot \ln x \)

## Sinusoidal functions

- \( y = a \cdot \sin(bx + c) + d \)
- Period = \( \frac{2\pi}{b} \)

## Quadratic equations

For \( ax^2 + bx + c = 0 \)

- \( x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \)

## Probability

- \( n! = n(n-1)(n-2)\ldots3 \cdot 2 \cdot 1, \) where \( n \in \mathbb{N} \) and \( 0! = 1 \)
- \( n^P_r = \frac{n!}{(n-r)!} \)
- \( n^C_r = \frac{n!}{(n-r)!r!} \)
- \( \binom{n}{r} = \frac{n!}{r!(n-r)!} \)

- \( P(A \cup B) = P(A) + P(B) \)
- \( P(A \cup B) = P(A) + P(B) - P(A \cap B) \)
- \( P(A \cap B) = P(A) \cdot P(B) \)
- \( P(A \cap B) = P(A) \cdot P(B \mid A) \)

## Logical Reasoning

- \( A' \) Complement
- \( \emptyset \) Empty set
- \( \cap \) Intersection
- \( \subseteq \) Subset
- \( \cup \) Union

contains Guides for Students, exemplars, and other support documents

Quest A+
contains practice questions and questions from previous diploma examinations

Field Test Request System

Field-test Information

School Reports and Instructional Group Reports
contain detailed statistical information on provincial, group, and individual student performance on the entire examination
Using Calculators

The Mathematics 30–2 Diploma Examination requires the use of an approved graphing calculator. The list of approved graphing calculators, along with the rules, list of prohibited properties, criteria, and keystrokes required to properly clear and configure each approved graphing calculator, is found on the Alberta Education website.

Students may bring one approved calculator that must be properly cleared and configured before AND after each diploma exam administration by the exam supervisor or teacher. If an approved graphing calculator is not cleared and configured properly, it may have prohibited properties such as symbolic manipulation capabilities, downloaded programs, the ability to provide exact trigonometric values or the ability to simplify radicals and rationalize denominators. Teachers and students should recognize that the different models of approved graphing calculators have a range of capabilities, and the choice of model to use or purchase will require personal or teacher analysis of the calculator’s capabilities and one’s individual or school circumstances. Teachers should also be aware of the capabilities that are available when the calculator is not configured for exam purposes as these capabilities may impact classroom instruction and assessment. These capabilities may also be applicable to other high school math and science courses.
How to Get Involved

High-quality diploma examinations are the product of close collaboration between classroom teachers and Alberta Education. Classroom teachers from across Alberta are involved in many aspects of diploma examination development, including the development of items; the building, reviewing, administering, and marking of field tests; the reviewing and validating of diploma examinations; and the marking of diploma examinations.

The development of test items from when they are written until when they appear on an examination takes at least one year. All items on Mathematics 30–2 Diploma Examinations are written by Mathematics 30–2 teachers from across Alberta. After the first year of provincial implementation of the program of studies, items are field tested to ensure their reliability and validity. Diploma examinations are reviewed by editors; a technical advisory working group composed of mathematics experts from post-secondary institutions, teachers, and curriculum staff; translators; and a French validation working group.

Alberta Education values the involvement of the teachers and annually asks school jurisdictions for the names of teachers who are interested in being involved in any of the development processes for diploma examinations. Teachers who are interested in developing items, constructing field tests, or reviewing and validating examinations are encouraged to talk to their principals about how they can submit their names for approval to be involved in these processes. Although the call for submissions occurs each fall, teachers are welcome to have their names submitted at any time.

Teachers may also be nominated by their school authority to mark written-response assignments for Humanities and Mathematics Diploma Examinations. The call for nominations occurs in early September (for January and April marking) and again in February (for June, August and November marking). Teachers who would like to be nominated to mark diploma exams are encouraged to talk to their principals.

Periodically, we may send out information to those Mathematics 30–2 teachers who are on our contact list. If you are not on that list and would like to receive updates related to Mathematics 30–2 assessment activities, please contact either Jenny Kim, Mathematics 30–2 Exam Manager, at Jenny.Kim@gov.ab.ca or Tony Cabay, Mathematics 30–2 Examiner, at Tony.Cabay@gov.ab.ca.
