

Memorandum

Date: November 13, 2019

From: Justin Wheler
Executive Director, Regulatory and Compliance

To: Alberta Emission Offset System Stakeholders

Subject: Flagging of the Quantification Protocol for Engine Fuel Management and Vent Gas Capture, Version 2.0

The purpose of this Memorandum is to inform offset stakeholders that the Quantification Protocol for Engine Fuel Management and Vent Gas Capture, Version 2.0 ('protocol') is now 'flagged' due to issues identified with the protocol. Based on Part 1, section 4(6) of the Standard for Greenhouse Gas Emission Offset Project Developers, no new projects can be initiated using the protocol, and no subprojects can be added to existing projects, without prior written authorization from the Director.

The department has not decided at this time whether the issues identified in the protocol can be resolved, and the protocol revised, or if the protocol will be withdrawn. The department will issue further correspondence on the impact to offset crediting periods and extensions once we have reached a decision to withdraw or revise the protocol.

Should you have any questions, please direct them to AEP.GHG@gov.ab.ca

Sincerely,
