

Bulletin 2004-04

July 30, 2004

PE Pipe Licensed with EUB over 700 kPa (100 psi)

This bulletin is being sent to all distributors & companies doing digital as-built mapping.

With the introduction to the as-built plans of PE pipe that is licensed with the EUB, the Branch finds it necessary to set the following digital mapping standard for this type of pipe.

Pipeline Text Level will be 33
Color will be 57
Style will be 0
Weight will be 0

Pipeline Level will be 34
Style will be 0
Weight will be 3
Colors (for outside diameter of pipe):
20 mm (nominal size) = 26
25 mm (nominal size) = 33
38 mm (nominal size) = 48
50 mm (nominal size) = 60
65 mm (nominal size) = 73
75 mm (nominal size) = 88
100 mm (nominal size) = 114

The reason for this new standard is because these pipelines are not under the Branch's regulatory authority & need to be on a level that can be turned off for the compiled Low Pressure Mapping Series that the Branch supplies to the EUB and distributes to industry clients.

Questions regarding this bulletin should be directed to Maureen Magee at (780) 427-1931 or email maureen.magee@gov.ab.ca.
