S292 Online Canadian Forest Fire Behaviour (FBP) System (CIFFC)

Overview/Description

The Canadian Forest Fire Behaviour Prediction (FBP System online course will provide a systematic method for assessing fire behaviour. During this course, students will learn how to fuel, weather and topographic factors influence fire behaviour. By gaining an enhanced understanding of the inputs that make up the FBP system, students will have a better grasp on predicting wildfire behaviour

Target Audience

Agriculture and Forestry employees involved in the effective and efficient management of wildfires, from initial attack crews to upper management.

Prerequisites

- CIFFC Online Principles of Fire Behaviour
- CIFFC Online Understanding the Fire Weather Index (FWI) System.

Registration

Forestry Division employees can register following instructions on the WF launch page.
