

## Part 2: Project Information

### Identify the items that pertain to your project:

- Farm Technology
- Farm Security

The *Farm Technology stream* will support the adoption of innovative digital technologies that minimize agricultural waste and optimize farm efficiency. By utilizing more detailed information and more powerful analysis tools, Alberta producers can manage their operations with greater precision and more accurately match inputs with requirements.

The *Farm Security stream* will support producers in their efforts to secure business assets. Farm security is a growing concern. Producers regularly deal with unwanted trespassers, theft and vandalism. Animal activism, stricter biosecurity measures and an increasing global food system means food security and safety are being linked directly to farm security and traceability. This program will support producers in protecting their business by encouraging the adoption of best management practices in farm security.
