

Alberta Mineral Information System Data Extracts - Details

At the end of each month, 11 complete data files are produced. These are:

- Mineral Agreements Data File
- Offset Notice Data File
- Crown Mineral Activity Data File
- Unit Agreement Data File
- DRRZD/ZD Data File
- Mineral Restrictions Data File
- Mineral Client Updates Data File
- Code Tables Data File
- Well Spacing Data File
- Crown Mineral Ownership Data File
- Mineral Encumbrance Data File

Files are produced from the Alberta Mineral Information System (AMI) in CSV (comma separated value) format. Each record has an entity type code, the entity key including agreement type and number, record type and various data fields of varying lengths.

The cost for a set of the complete data files for mineral is \$1250.00 and is accessed through the [Electronic Transfer System \(ETS\)](#) with a secured password.

Daily update files in the same format as the complete data files are also available at a cost of \$650.00 per month. The daily update files include all updates performed on AMI on a particular day. The daily update files include the date within the file name and are retained on the ETS site for a period of 30 days. Prior to utilizing the daily update file the requestor's database must be loaded with a complete data file.

Note: The codes which are no longer valid in AMI (as the substance is invalid) are not being used in data extracts. The only codes which are valid are to be extracted in data files.

The land in these files is in ATS format. Meridian - Range - Township: Section - part of section.

For information on Graphical Land Information Management Planning System (GLIMPS) in CSV (comma separated value) format, see:
