

## 1. Dose Table: Medetomidine-Telazol® (MZT) for Ungulates in Alberta

Mixing instructions for **MZT**: Add 1 ml of **30 mg/ml medetomidine** and **1 ml of sterile water** to 1 vial (**500 mg**) of Telazol®. This will result in a solution that contains *approximately* 13.5 mg/ml of medetomidine and 230 mg/ml of Telazol®.

- The dose table below is constructed to dose large ungulates (moose, elk and bison) at a dose of approximately 0.080 mg/kg of medetomidine plus 1.4 mg/kg of Telazol®.
- Smaller ungulates will be dosed at 0.11 mg/kg of medetomidine plus 1.8 mg/kg of Telazol®.
- The only exception to the small ungulates is the pronghorn that will be dosed at 0.16 mg/kg of medetomidine plus 2.8 mg/kg of Telazol®.
- Atipamezole (**ATI**) is provided in a **10 mg/ml** solution for reversal of sedation and will always be administered at **5 times** the medetomidine dose by IM injection.
- Drug volumes are in milliliters (ml). Remember to “top-up” the dart to full volume with sterile water.**

**1. (con't) Dose Table: *Medetomidine-Telazol<sup>R</sup> (MZT)* for Carnivores in Alberta**

- Drug volumes are in milliliters (ml). Remember to “top-up” the dart to full volume with sterile water.
  - For carnivores under 100 kg, use the 10 mg/ml medetomidine (M10) solution
  - For carnivores over 100 kg, use the 30 mg/ml medetomidine (M30) solution.
  - For Telazol (T), add 2 ml of sterile water to make a concentration of 250 mg/ml.
  - Atipamezole (A) is provided in a 5 mg/ml (A5), 10 mg/ml (A10) or 20 mg/ml (A20) solution for reversal of sedation and will always be administered at 5x the medetomidine dose by IM injection. Use the 10 or 20 mg/ml in carnivores over 100 kg.

<sup>a</sup> Xylazine sold at 100mg/ml as Rompun®, and at 300 mg/ml as Cervizine 300®.

<sup>b</sup> For top-up doses at ≤ 15 minutes post-immobilization, use 1/3 the volume of drug that was required for the immobilization dose.

<sup>c</sup> For top-up doses at > 15 minutes post-immobilization, administer ketamine at 3 mg/kg by intramuscular route.
