

FWMIS Fishkill Loadform One-Pager

Fisheries and Wildlife Management Information System – Fisheries Loadforms

The intent of the FWMIS Fishkill loadform is to collect brief information on fishkills in Alberta to allow for quick tracking and reference.

Project & Reference Info worksheet

Enter a project name which includes waterbody name and year

Enter a brief description of the fishkill event.

Fishkill Survey worksheet

Within the Survey Parameter (orange) section, enter the Date and Fish Kill Extent.

Within the Project Location (blue) section, enter the waterbody name.

Within the Count (green) section, enter species and counts or range. Columns BK-BQ define cause, from general cause to more detailed information. (1) If Environment or Contamination is selected as the Fish Kill Type, the field Causal Agents Code (BP) must be filled out to capture the more specific cause. (2) If Disease is selected as the Fish Kill Type, the Disease Group Code (BQ) can be filled out to capture the more specific cause, if known. (3) If further detailed information is known, comments can be entered into the Causal Agent Detail text field (BO).

General Notes:

If there are multiple causal agents, these can be accommodated by entering on a subsequent row, as shown in the example loadform.

Multiple Fish Kill events can be entered into a single loadform to capture past events if needed.
