RCP Request (\$)

Project Description (plain language, maximum 50 words)

Alberta Alignment

The RCP coordinates with the application submission to the Canada Foundation for Innovation (CFI). Building on the Benefits to Canada criterion in the CFI application, and using up to **ONE page**¹, address EACH of the following:

1. How the proposed infrastructure will advance applicable provincial outcomes and innovation targets listed in the [Alberta Technology and Innovation Strategy \(ATIS\)](#) and the institution's research priorities.
2. Provide clear and specific linkages between the expected outcomes and expected benefits of the proposed research for Alberta and how these will be realized.
3. How the proposed research infrastructure will contribute to the attraction and/or retention of talent, as well as overall research excellence in Alberta.
4. How the infrastructure relates to existing infrastructure at the institution and other post-secondary institutions in Alberta. Where applicable, address how the requested infrastructure builds on or complements infrastructure previously supported by the Government of Alberta.

For multi-institutional projects:

5. Identify what infrastructure and/or capability will be acquired in Alberta, the impact in the province, and a rationale for the requested provincial contribution.

Refer to the [Research Capacity Program Guidelines](#) for additional information.

¹ An extra page (two pages total) is provided for multi-institutional Research Infrastructure submissions **only**. Pages beyond the limit will not be assessed in the application process.

ATIS Identification

Proposals are encouraged to align with provincial research and innovation priorities in the context of the ATIS and support the institutional research priorities. This portion of the Alberta Alignment Module is for statistical purposes only and will not be used for any evaluation processes.

ATIS PRIORITIES

Identify how and to what degree the proposed research project aligns with ATIS priorities by indicating a percentage amount. Only select applicable categories. The combined total of all applicable categories must equal 100%.

Priority Area	Alignment (%)
Energy, minerals and clean-tech	
Agriculture	
Health and disease prevention	
Emerging technologies
