

September 9, 2021

In 2007, Alberta Transportation began allowing the operation of semi-trailers with a single axle self steer lift axle (quad axle semi-trailer) for the purpose of hauling logs provided a permit is obtained by the carrier. As part of the conditions of the permit, all quad axle semi-trailers must be equipped with an approved on-board monitoring system which monitored when the lift axle was deployed.

Alberta Transportation now recognizes these trailers as an approved log haul configuration and the permit condition requiring the monitoring system will be removed. This notice is to inform you as a permit holder, that effective November 1, 2021 monitoring of these trailers will no longer be required.

If you have any questions, please contact the Central Permit Office 1 800-662-7138.

Sincerely,

Andrew Pillman
Director, Permitting and Approvals
