INTRODUCTION

In this user manual, you will learn about Alberta Energy and Minerals Interactive Maps:

- Screen layout
- Information panel and map layers
- Toolbar
 - Home
 - Queries
 - Tools
 - Analysis
 - Go to Location
 - Download Data
- How to navigate the map
- How to use queries
- How to use identify
- How to use annotations
- How to create a printable map
- How to export a map

Note: As this manual demonstrates the use of the GeoView tool, the data in some instances may not portray the actual Crown or Freehold ownership and is not specific to a particular mineral type map.

SCREEN LAYOUT

The GeoView screen display has three mains sections:

TOOLBAR AREA	INFORMATION PANEL	MAP VIEW
Contains numerous tools that are used to move around the map, find or search information on the map, print the map etc. These tools are categorized into high-level groups: Home, Queries, Analysis, Go to Location and Download Data	Shows different kinds of information/results when you interact with the map. For example, this panel displays the Map Layers where you can select different layers to hide or show on the map.	Shows the map window where you can interact with the map by zooming, panning, annotating.

INFORMATION PANEL AND MAP LAYERS

Map layers control the display of the map layers list. You can check or uncheck the map layers according to your requirement. You can also control the visibility and transparency of the map using the sliders.

The screenshot displays the GeoView application interface. At the top is a navigation bar with tabs: Home, Queries, Tools, Analysis, Go to Location, and Download Data. Below this is a toolbar with icons for Pan, Zoom In, Zoom Out, Initial View, Full Extent, Previous Extent, Next Extent, Identify, Bookmarks, and Help. A 'Find Data' button is also present.

The main interface is divided into two panels. The left panel, titled 'Layers', contains a list of map layers with checkboxes and expand/collapse icons. The right panel shows a map of Alberta with various colored overlays representing different geographical features.

Annotations with callouts provide specific instructions:

- A blue callout box points to the 'I want to...' button: "I want to..."
- A purple callout box points to the transparency slider for the 'Base Layer': "Click on the slider to control transparency of displayed layers"
- A purple callout box points to the expand/collapse icons: "Click on the '+' or '-' to expand or collapse the layers"
- A purple callout box points to the 'Metis Settlement' layer: "Uncheck the layer to control visibility on the map"

The map on the right shows the Alberta Boundary and various municipalities. A pink circle highlights a specific area on the map. The bottom of the interface includes a scale bar (0 to 200km) and a scale indicator (Scale 1: 6,268,321).

INFORMATION PANEL AND MAP LAYERS – LAYER GROUP AND LAYER NAME

The Information Panel display consists of a Layer Group and Layer Names. When the Layer Group is expanded, the Layer Names will be visible. You can check/uncheck the Layer Group and Layer Names to control visibility in the map. The display of the Layer Group will override the display of the Layer Names.

INFORMATION PANEL – MAP LEGEND

The Map legend shows the corresponding legend for the layers used in map. You can toggle between Show Legend and Show Layer.

TOOLBAR

The toolbar contains many of the tools you use to pan (move around), zoom in and out, as well as to find and manipulate the information that is stored in the map.

The toolbar is divided into **Tabs** that group tools into high-level functions for example; Home, Queries, Tools, Analysis, Go to Location and Download Data. Each tab is divided into **Sections** by function for example, for the Home Tab; there are Navigation Tools and Find Data sections.

TOOLBAR TAB - HOME

Use these tools:	To:
 Pan	Pan (move) the map in any direction. To pan the map, click on it and drag in any direction. Use the Pan tool to return to panning when you have used other tools.
 Zoom In	Zoom in click and drag an area on the map or use your roller on your mouse.
 Zoom Out	Zoom out click and drag an area on the map or use your roller on your mouse.
 Initial View	Return to the extent (scale) that the map was at when it opened.
 Full Extent	Return to the extent (scale) that the map was at when it opened.

 Previous Extent	The map is zoomed backward to the previous extent (previous view of the map).
 Next Extent	If you have zoomed forward and back the map will zoom forward to the next extent.
 Identify	Identify information at the point on the map that is clicked is available at the section level scale.
 Bookmarks	Create and navigate to a previously created bookmark. To add a bookmark for the current extent, click the plus +, enter a name, and then click OK.
 Help	Opens page that lists the Geoview Training Manuals related to the specific mineral map accessed.

How to navigate the map – Pan

How to navigate the map – Zoom In / Zoom Out

Zoom In and Zoom out allows user to view selected areas at different viewing scales.

Selecting the 'zoom out' function works opposite of the 'zoom in' function.

Note: Once you are in the zoom mode you can also use the wheel on your mouse to zoom in and out.

How to navigate the map – Initial View / Full Extent

Initial View and Full Extent returns the map to the extent (scale) that the map was at when it opened.

How to navigate the map – Previous Extent/Next Extent

This allows user to navigate to go back to a previous extent the user has viewed and then the next extent will go forward.

How to use – Identify

Note: When using the identify function you need to have the section scale visible.

How to use – Bookmarks

Open map

Find area of interest

Open Metallic and Industrial map

Find area of interest

Repeat bookmark process.

Note: Bookmarks are based on the user not on the different mineral type maps.

If you are in the Coal map and click on bookmarks and select the Metallic & Industrial bookmark it will display the Met & Ind bookmark area on the Coal map.

Alberta Energy

Geoview

The Department of Energy Geoview system provides a graphical map-based interface for finding and viewing basic information on the disposition of Alberta-owned mineral resources. The system provides the ability to search for, view and print maps and text reports on Mineral Rights, Agreements and Restrictions.

This list pertains to the manuals related to the Metallic and Industrial Minerals Map

For help with using the system, please make use of the following links:

- [GeoView Training](#) - Provides a complete listing of all the functions and toolbars.
- [Download Data](#) - Provides a complete listing of all the functions and toolbars in Download Data tab.
- [Mineral Assessment Report](#) - Provides a guide to using Mineral Assessment Report data.

TOOLBAR TAB – QUERIES

Use these	To:
 Layer List	Show the layer list in the Map Layers panel.
 Query	Open the Query in the Information Pane. The Query makes it possible to specify a search by layer, field, and values. It is also possible to add multiple conditions to a search. Results will be returned.
 Filter	Open Filter in the Information Pane. The Filter Builder enables end users to filter the features that show on the map. The Filter makes it possible to specify a definition expression to apply for a certain layer using its fields and specific values. The layer will be filtered to show only the results of the definition expression. Multiple conditions can be used to filter a certain layer.

Note: The different mineral maps display different layer information.

How to use Queries – Steps

1. Select a query layer, layers available will display in a drop down
2. Enter data e.g. land key
3. Add another condition as required
4. Add spatial filters
5. Click search

When search is executed you may end up with more than one result, select the one that you require.

The result of the query is displayed.

How to use - Filter

How to use Queries - Results - View Detailed Report

The first one displays data in the information panel and only limited data.

How to use – Filter

TOOLBAR TAB – TOOLS

Use these	To:
 Print	Open the Create a Printable Map dialog box where you can select the Layout, OutputFormat, Resolution, and Scale to print the map.
 Export	Open the Export a Map Image dialog box and select the image format that you want to export the map into. You can export to BMP, JPEG, PNG, TIFF, GeoTiff and PDF Image formats.
 Point	Draw a point on the map. The shape, size, colour and transparency of the point can be set using tools that appear on the toolbar when you select one of the drawing tools.
 Freehand	Draw freely on the map in any direction. The style, thickness, colour, and transparency of the line can be set.

 Line	Draw a straight line or click to change the line and draw in a new direction. The style, thickness, colour, and transparency of the line can be set.
 Polygon	Draw a polygon on the map, clicking to change direction. Double-click to stop drawing. You can set the thickness, colour, and transparency of the border and the colour and transparency of the fill.
 Freehand Shape	Drawing freely on the map for irregular shapes for such as portions of land. The style, thickness, colour, and transparency of the line can be set.
 Rectangle	Draw a rectangle on the map. Click and drag across the map. You can set the thickness, colour, and transparency of the border and the colour and transparency of the fill.
 Circle	Draw a circle on the map. Drag into the center or outwards to change the size of the circle. You can set the thickness, colour, and transparency of the border and the colour and transparency of the fill.
 Ellipse	Draw an ellipse on the map. Drag in different directions to change the shape and size of the ellipse. You can set the thickness, colour, and transparency of the border and the colour and transparency of the fill.
 Text	Add text to the map. When text is selected the snapping and style buttons will display. Click on the map and type the text. You can change the font, size, colour, transparency and angle of the text. You can add multiple lines of text and select layer and field information to add to the label.
 Enable Snapping	Snapping tools are enabled when text button is selected. The user may enable or disable snapping by clicking the Enable Snapping button.
 Select Snapping Layers	The user may choose which layers are affected by snapping by clicking the Select Snapping Layers button. When enabled, snapping allows the user to precisely draw shapes on the map by snapping to the nearest point, vertex or edge of an existing shape within a configurable radius around the mouse pointer
 Styles	You can change the font, size, transparency. You can add multiple lines of text and select layer and field information to add to the label.
 Edit	Edit the points of a drawing on the map. When you click on the drawing you want to edit, the points activate and you can then drag any of the points in any direction to change the shape of your drawing. You can also rotate the drawing by clicking and dragging the square above the marquee in the middle of the graphic.
 Erase	Remove drawings from the map one at a time by clicking on each one.
 Clear	Clear all the drawings on the map at the same time.

How to create a printable map – map in formatted style

You can change the title and add notes on the map. All the changes to the map can be printed to PDF. The visible area of the map is the area which will appear in the created PDF map.

Your map will run in the background and notify you in the information panel that it is ready for viewing, then open file for viewing and select print option (file on the toolbar).

How to export a map – map in non-formatted style

Export a map image pop up will display.

You can then print or save image.

How to use draw tools – drawing and Text

Different shapes and text can be added to the map but these are temporary. Leaving or refreshing the session will clear. These tools are used on the map for the purpose of printing.

Based on the draw tool selected you can also select a style.

Enable Snapping

Snapping is useful when you are drawing a polygon and want it to follow the lines in another graphic, displays a point indicator.

Select Snapping Layers

Styles

User must select the type of drawing tool for the style options to display.

Example if draw tool selected is freehand the style options are.

Example if draw tool selected is rectangle the style options are.

Using the line

Using the circle

If text is selected you can select a font style.

Note: There is no option currently that will allow the user to select font style size or colour.

Text will display.

User can also enlarge the text or move.

To edit/remove any drawing or text data put on the map you can use the edit, erase or clear functions.

TOOLBAR TAB – ANALYSIS

Use these	To:
 Point	Identify data at a particular point anywhere on the map. All the features beneath the point you click are listed in the Results List.
 Freehand	Identify features by drawing a line in any direction on the map. All the features that intersect with the line you draw are listed in the Results List.
 Line	Identify features by dragging a line in any direction on the map. All the features that intersect with the line you draw are listed in the Results List.
 Freehand	Identify features by drawing a segmented shape over an area on the map. All the features beneath the shape you draw are listed in the Results List.
 Rectangle	Identify features by drawing a rectangle over an area on the map. All the features beneath the shape you draw are listed in the Results List.
 Distance	Measure distances on the map by drawing a segmented line.
 Area	Measure an area of the map by drawing a shape.
	When distance/area is selected the units and snapping buttons will display. Change the unit of measurement on a drawing to other options like Kilometers, Hectares, Acres, etc.
 Enable Snapping	The user may enable or disable snapping by clicking the Enable Snapping button.
 Select Snapping Layers	The user may choose which layers are affected by snapping by clicking the Select Snapping Layers button. When enabled, snapping allows the user to precisely draw shapes on the map by snapping to the nearest point, vertex or edge of an existing shape within a configurable radius around the mouse pointer.

 Edit	Add the distance or area measurement to the map as a drawing.
 Erase	Erase a drawing by clicking it.
 Clear	Clear all the drawings on the current map.

Note: In order to enable the Drawing tools, a drawing must first be created.

How to use identify tools – Drawing

Note: When specific draw/identify button selected, addition options will display.

Using the point

Using the rectangle

Using the enable buffering and identifiable layers

How to use – Distance and Area

Change the unit of measurement on a drawing to other options like Kilometers, Hectares, Acres, etc.

Options of measure

To edit/remove any drawing or text data put on the map you can use the edit, erase or clear functions.

How to use – Buffering

TOOLBAR TAB – GO TO LOCATION

Use these	To:
 Go to ATS	The Go to ATS (Alberta Township Survey) makes it possible to search by a specific land location (M/R/T: Sec, Qtr Sec)
 Go to NTS	The Go to NTS (National Topographic System) makes it possible to search by a map sheet (e.g. 84F10)

How to use Go to Location – Go to ATS

User can do an Alberta Township Survey (ATS) search based on m/twp/rge, m/twp/rge/sec or m/twp/rge/sec/qtr sec only.

The screenshot shows the 'Go to Location' dialog box. The 'Go to Location' tab is selected. The 'Go to ATS' button is highlighted. The 'ATS Specification' form is shown with fields for Mer, Rge, Twp, Sec, and QS. The 'Search' button is highlighted.

Annotations:

- Select Go to Location
- Click on Go to ATS
- Enter the land location
- Click search

Workflow (1)  

 Section: 4-10-010: 06  Result will display

How to use Go to Location – Go to NTS

User can do a National Topographic System (NTS) search based on the NTS system used by Natural Resources Canada for providing general purpose topographic maps of the country.

The screenshot displays the 'Go to Location' workflow in the GeoView application. The top navigation bar includes 'Home', 'Queries', 'Tools', 'Analysis', 'Go to Location' (highlighted with a red box), and 'Download Data'. Below the navigation bar, the 'Go to Location' section contains three icons: 'Go to ATS', 'Go to NTS' (highlighted with a red box), and 'Go to Location'. A red box also highlights the 'Go to Location' text label below the icons.

The 'Go To NTS' search interface is shown below. It includes a title bar 'Go To NTS' with a close button. The main text states: 'The "Go To NTS" search will find any 1:50,000 National Topographics System tile extent within the province of Alberta.' Below this, examples are listed: '*82G08' and '*74E04'. A search input field contains the text '74e04' (highlighted with a red box). A red callout bubble points to the input field with the text 'Enter the NTS map sheet'. Below the input field are 'Clear' and 'Search' buttons.

The 'Workflow (1)' section shows a single step: 'National Topographic System (NTS): 74E04' (highlighted with a red box). A red callout bubble points to this step with the text 'Result will display'. To the right of the workflow list is a zoom control with a '+' button, a '-' button, and the text '16-0'.

TOOLBAR TAB – DOWNLOAD DATA

Note: Download Data – currently only applies to Coal and Metallic and Industrial Minerals Maps.

Use these	To:
 Shapefile	Download the zip file containing the Coal or Metallic and Industrial Minerals Agreement data in SHAPE file format.
 DXF file	Download the zip file containing the Coal or Metallic and Industrial Minerals Agreement data in DXF file format.

How to download shape file data

Name	Type	Size
 Met_Agreements.shx	SHX File	11 KB
 Met_Agreements.shp.xml	XML Document	12 KB
 Met_Agreements.shp	SHP File	5,126 KB No 7,517 KB
 Met_Agreements.sbx	SBX File	1 KB No 1 KB
 Met_Agreements.sbn	SBN File	8 KB No 14 KB
 Met_Agreements.prj	PRJ File	1 KB No 1 KB
 Met_Agreements.dbf	DBF File	73 KB No 3,090 KB

Will display list of files

How to download DXF file data

Note: The dated link is 24 hours behind live data. Upon clicking on the dated link, a zip file is provided to open or save.

How to use info

Alberta Survey

Note: Road Allowance info sample is missing.

Road Allowance Land Key Table for Metes and Bounds and Land Description Samples

- o Lands must be only North (2 miles) or South (1 mile) of a section as per valid land descriptions for Road Allowance.
- o This information describes the related metes and bounds based on the road allowance orientation as shown on the Township overlay.

Landkey	Road Allowance Orientation	Appendix	Description
4-27-027:11	RS	4-27-027:11RS	Road Allowance lying to the South.
4-27-027:11	RW	4-27-027:11RW	Road Allowance lying to the West.
4-27-027:11	RI	4-27-027:11RI	Road Allowance being the South West intersection.

TOWNSHIP OVERLAY FOR ROAD ALLOWANCE
