Thank you for tuning in.
The Town Hall event will begin shortly!

Ask questions using the Q&A function.
Your cameras and microphones will not be in use.
Turn your audio up to ensure you can hear the presenter.

ECM Directors Updates

IM Aware June 10, 2025

Natasha Streeter, A/Director Content Management Operations

Erin Zybart, A/Director IM Programs

Riza Gallerde-Aryee, A/Director Records and Storage

Enterprise Content Management Branch

Data and Content Management Division

Content Management Operations

CMO Updates

■ Technical Services

- Development of future state disposition process in M365
- Communications Plan and User Training in development
- Developing disposition flow automation

■ Forms

- Submitted request for funding from DDD through Intake process. Waiting for decision to move to next stage (RFP)
- Process to renew Adobe Experience Manager (AEM) license for 2025-26 is in process

CMO Updates

■ eDiscovery Services

- Organizational Change – eDiscovery Team has now moved under Active File Management
- Introduction to Litigation Response Course will be available in 1GX

■ Schedule Modernization/FCT Team

Sprint 1 Schedules

- Communications, IMT , Education and Learning, and Asset Management

Sprint 2 Schedules

- Risk Management, Finance Amendment, Law Enforcement

Information Management Programs

Content Inventories

As of 2025-05-30

Status	Number	Percent
CIs Completed	17	31.48%
CIs In Progress	12	22.22%
CIs Deferred	5	9.26%
CIs Awaiting Completion	20	37.04%
Project Completion	54	47.37%

Business Activity Registry

As of 2025-05-28

- BAR Phase 1 (System Development)
 - Develop system to store, manage and report on all data collected in content inventories
 - Project is 90% complete as of May 28 and is expected to be complete by September
- BAR Phase 2 (Data Transformation and Import)
 - Clean and import data from content inventories
 - Project is 91% complete as of May 28 and is expected to be complete by end of June

Agenda

Disclaimers

BAR is in development

BAR is an internal system

BAR Data

What is BAR's purpose?

What is content inventory data?

What is a content inventory?

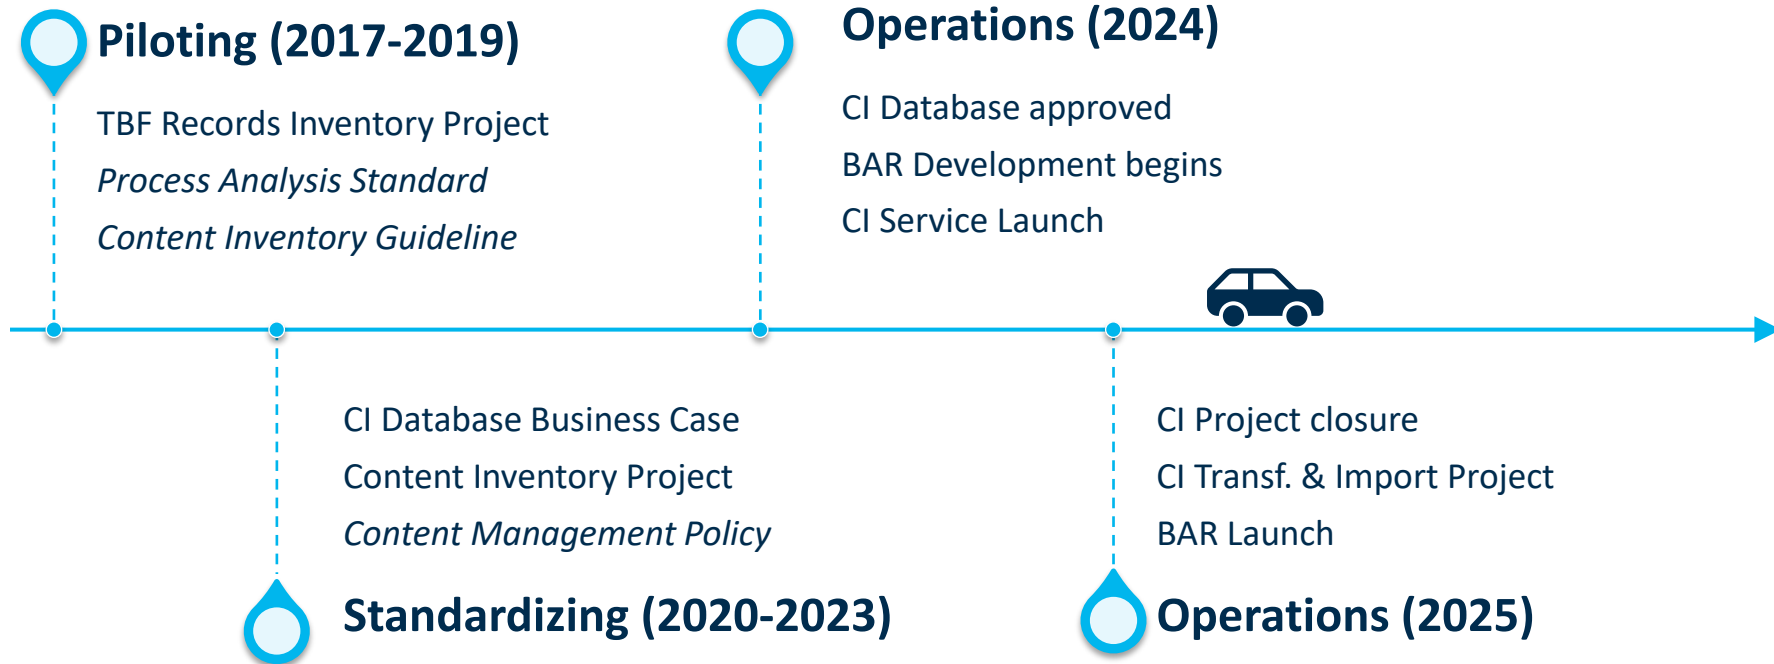

A list of a business area's work processes – and associated content.

Captured through business and IM collaboration using a standard template.

BAR Data

- The Content Inventory Project (2021-2025) generated 850+ content inventory spreadsheets.
- Content inventories guide:
 - IM service delivery; and
 - development/validation of GoA functional classification and retention schedules.
- BAR is the central repository of GoA content inventory data.

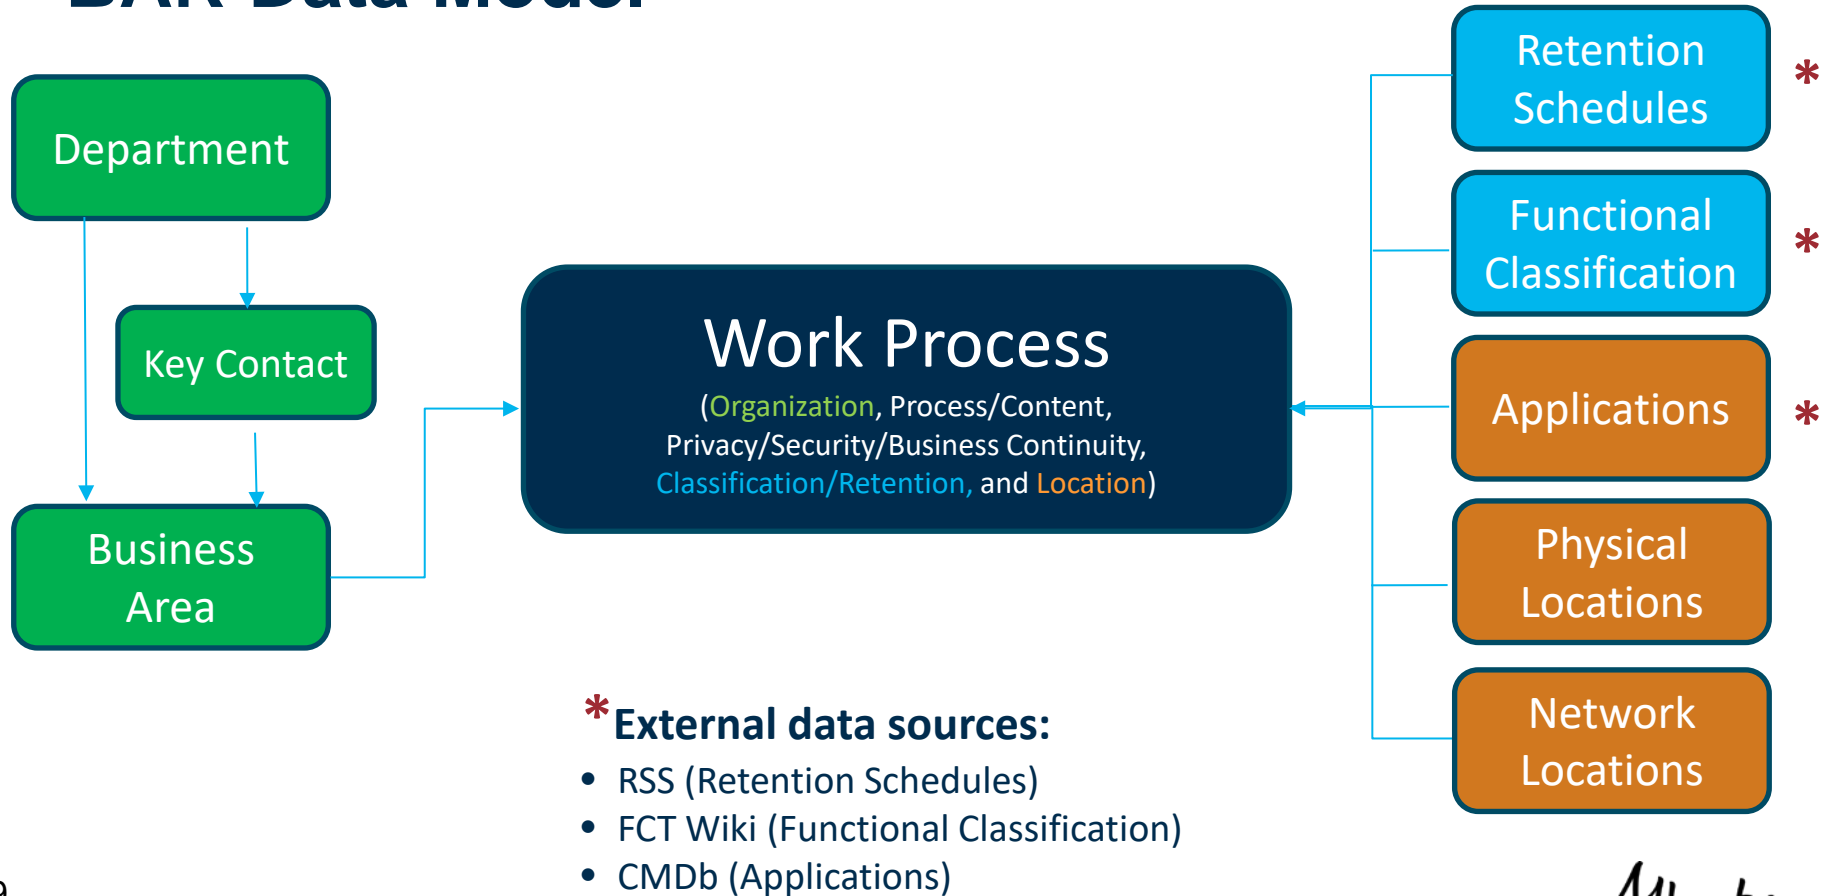

It's been a long road...

What's in a name?

Agenda

1. About AltaML
2. GovLab Overview
3. Importance of RAI
4. RAI Principles in action
5. People, Processes, and Tools

Who We Are

AltaML builds and invests in vertical AI applications and is a trusted partner in operationalizing responsible AI.

Working with organizations that want to use AI to leverage data and develop solutions that drive tangible business results, AltaML empowers partners to create operational efficiency, reduce risks, and generate new revenue sources.

Using Our Solutions

Offices based in Edmonton, Calgary, Toronto, and Waterloo.

An abstract geometric pattern composed of various dark gray shapes, including circles, squares, and rounded rectangles, arranged in a complex, overlapping manner on a black background. A horizontal dotted line in a light blue color extends from the left edge of the frame towards the center, ending at a solid light blue circle.

About GovLab

The Triple Helix Model

Our Purpose

Solving public sector problems by leveraging the rich data of the public sector and the speed of industry to build AI solutions to benefit citizens and governments.

Objectives

Improved Services to Citizens

Efficiencies lead to greater transparency, improved quality, and faster service delivery.

Innovation Ecosystem

Strong partnerships with the public and private sectors enable the public sector to make Alberta a leader in AI/ML adoption.

Talent Attraction and Retention

Upskill/reskill public sector workforce in AI/ML, and attract students to consider careers in this field.

Responsible AI

And why it matters

responsible artificial intelligence (RAI)

noun

Prioritizes ethical considerations, fairness, transparency, and accountability throughout the AI development and deployment life cycle.

RAI Matters to Different People in Different Ways

Avoiding Harm

Technical Debt

It's the Law

Business Reputation

RAI Principles in Action

How to develop AI solutions responsibly

Nicole Janssen

Co-Founder and CEO, AltML

Becoming the global leader in responsible AI presents the most significant opportunity for our country in our lifetime. **If we don't grab hold of this opportunity now, we will not compete.**

Building a Framework for Responsible AI

Inclusivity

Fairness

Transparency

Accountability

Safety & Security

Privacy &
Data Protection

Awareness &
Empowerment

Guiding Principles

Inclusivity

Inclusive AI development aims to benefit people and the planet for the **betterment of all**. This is best achieved through **diverse participation** in the design and development of AI solutions.

Example

Diversity, Safe, and Inclusive Policy.

Fairness

AI development must prioritize **human-centered values**, including rights, equality, fairness, and justice, with safeguards to mitigate bias.

Example

Use cases with a high risk of bias and no way to monitor are not pursued.

Transparency

Transparency in AI involves **disclosing its usage** and enabling understanding of its development, operation, and outcomes. It's about providing **explainability** for users or impacted parties.

Example

The wildfires project includes predictions based on the 'top three contributing features.'

Accountability

Organizations and individuals must be clear on **who is accountable** for the outputs of AI systems. AI outcomes should be audited to **prevent conflicts** with human rights and environmental well-being.

Example

A human-in-the-loop approach ensures informed subject matter experts validate predictions before any action is taken.

Safety & Security

AI systems must serve **legitimate purposes**, prioritizing robustness and reliability to build trust while mitigating safety and security risks.

Example

Compare predictions in production against the ground truth.

Privacy & Data Protection

Privacy must be safeguarded
throughout the AI life cycle.

Collaboration is key to establishing data protection measures and adhering to privacy frameworks.

Example

Aggregate address locations when presenting results.

Guiding Principles

Awareness & Empowerment

Public trust in AI hinges on accessible **education** and **expert guidance**.

Transparent communication helps foster understanding, and empowerment ensures teams are **encouraged to bring forward concerns** about the usage of AI.

Example

Educate on responsible AI and its relevance to the use case during project kickoff and throughout project lifecycle.

Responsible AI
starts
with you.
